

MERIDIAN COMPARATIVE MEDICINE CENTER

*Division of Laboratory Animal Resources***Animal Facility Research Activity Log**

Vivarium Building 3, Room 214 – Rodent Barrier Suite

Protocol No.:	IACUC-2026-0447	Approval Date:	15 Jan 2026
Principal Investigator:	Dr. Elena Kowalski, Dept. of Comparative Medicine	Expiration:	14 Jan 2029
Study Title:	Efficacy of NX-2210 in a Murine Model of Chronic Neuroinflammation	Pain Category:	USDA Category D
Sponsor:	Vertex Biosciences, Preclinical Neuroscience Unit	Species:	Mice, Rats

 Protocol Overview and Scope

This log documents all husbandry, clinical observation, procedural, and enrichment activity associated with Protocol IACUC-2026-0447 within the rodent barrier suite of Building 3. Entries must be completed in real time by the technician performing the activity and countersigned by the attending veterinarian at the intervals specified in the approved protocol. No retroactive entries are permitted; corrections must be made with a single strike-through, initialed and dated.

Approved animal population

- C57BL/6J mice, male and female, 8–12 weeks at enrollment (n = 48)
- Sprague-Dawley rats, male, 10–14 weeks at enrollment (n = 20)
- Housing: individually ventilated caging, 4–5 mice per cage or 2 rats per cage
- Approved procedures: intraperitoneal injection, tail-vein blood draw, oral gavage, terminal perfusion under deep anesthesia

Status legend used throughout this log.

● Normal – within expected range ● Watch – monitor next check ● Concern – veterinary review required
▲ Emergency escalation
